

NETconsent Reporter

Analyse, track, present and manage policy and risk management information

NETconsent Reporter enables organisations to simply and quickly produce summary, detailed and evidential reports in real-time, delivering management information at all levels.

NETconsent Reporter provides comprehensive reports for all the NETconsent modules, including Policy Manager, Examiner and Assessor. NETconsent Reporter's comprehensive monitoring and summarising capabilities offer real time and historical views of activity, providing organisations with the information needed to effectively reduce the many risk exposures in today's litigious society.

Benefits

- ◆ Enhance management decisionmaking by providing real-time compliance status reports
- ◆ Provide exception information to management, identifying noncompliance reasons
- ◆ Identify compliance, knowledge and risk factors, enabling action to be taken based on facts
- ◆ Demonstrate clear cost efficiency by automating reporting
- ◆ Deliver sound corporate governance by guaranteeing confidence in compliance reports

Features

- ◆ Secure browser-based reporting portal
- ◆ Real-time compliance reports
- ◆ Graphical management reports
- ◆ Detailed evidential reports
- ◆ Support for custom reports
- ◆ Intuitive report generation with selection criteria
- ◆ Secure access control
- ◆ Proven scalability & reliability
- ◆ Multiple output formats – Print, PDF, Excel, Word etc.
- ◆ New report templates downloadable

NETconsent Reporter Overview

Summary Reports

Summary reports, designed for Board level and management distribution, clearly illustrate an organisation's compliance against their corporate policies. These reports show the overall compliance status of all policies and users. They can be generated by business area, individual policy, groups of policies, individual user or groups of users.

Compliance reports deliver an exact and quantifiable status report of the organisation's current compliance status. Reports can be run against all current users and policies or specific subsets of users or selected policies. Identification of non-compliance exceptions (ie declined or pending users) can be provided to operational managers.

Detailed Reports

To improve processing efficiency, detailed reports show historical policy and user activity, delivering exception and evidential information.

Historical reporting can be used to review what actions have been carried out by an individual or group(s) of employees. These reports are typically used for internal audit purposes or incidents related to disciplinary or tribunal matters.

Exception reporting supports the effective resolution of potential problem areas, arising where employees have declined or not yet accepted a policy. Users are able to add their own comments about a policy, questionnaire or assessment. This information is summarised within NETconsent reports and provides a centralised and audited source of feedback for policy managers.

System Reports

High level reports clearly show NETconsent's current deployment status within an organisation. System reports show the status of policies, distribution settings, review dates, tests and assessments.

These reports make the day-to-day administration of NETconsent simple and user-friendly for non-IT professionals.

Custom Reports

The range of standard reports within NETconsent are regularly reviewed and updated. These are downloadable from the NETconsent web site without the need for customers to upgrade their installation of the NETconsent software suite.

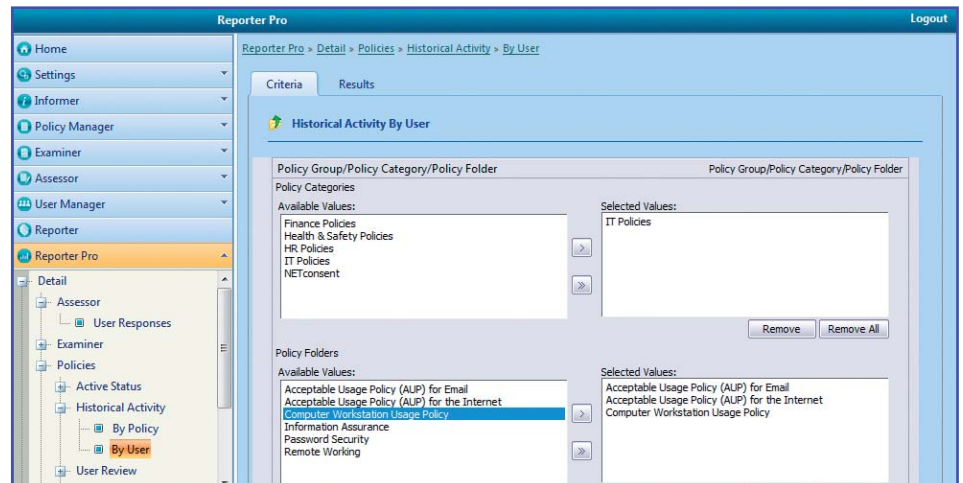

Where additional specific reports are required, please contact NETconsent to discuss your requirements or to upgrade to enable you to write your own reports.

Inbuilt Flexibility

Each report is supported by the provision of a comprehensive range of parameters. A user can select from these as they request a report in order to provide exactly the management information they require to identify and resolve operational issues.

Licensing Options

NETconsent Reporter is provided with a three concurrent user license. Please contact NETconsent for further information on upgrading this. NETconsent Reporter provides an extensive range of reports to support decision making at all levels of an organisation.
